

 **Site Manager 8**
Macrium Software

Backup and restore data at scale

Macrium Site Manager is a platform that makes it easy for organizations to deploy, configure, and monitor Macrium Reflect backup at scale.

By giving you full visibility and access to the tools you need to track and configure your Macrium Reflect installations in a single pane of glass, you can be confident that a core component of your data protection and disaster recovery strategy is up and running.

With remote sync to S3-compatible storage providers, including Wasabi, and simple disaster recovery so you can restore across all machines and servers in minutes, Site Manager combines flexibility with power, putting SysAdmins and IT support teams in organizations of all sizes in control.

“Being able to see - at a glance - in Site Manager that our backups are scheduled, I know everything’s running nicely. The ease at which I can quickly deploy agents and manage our repositories is a big plus.”

Central backup scheduling
Includes intra daily backups.

Remote sync to cloud storage
Sync to S3, Wasabi, and others.

Rapid disaster recovery
Restore data with a single USB.

Full visibility
Monitor system performance.

Advanced computer grouping
Selectively automate backup configuration.

How to use Site Manager

Macrium Site Manager is free to use. There are two ways it can be used with two different types of Macrium Reflect licenses.

Deploy agent licenses

Site Manager can be used to deploy and manage Macrium Reflect Agent Licenses. These are instances of Reflect backup that are controlled within the management console.

Configure and monitor existing installations

Site Manager can also be used to configure and monitor Standalone installations that may have already been installed on a computer or server. Once Site Manager is set up it will connect to Standalone installations on your network.

Talk to your sales representative to discuss purchasing Macrium Reflect with a license that works best for you.

Scale further with MultiSite

Site Manager can be extended using MultiSite, a cloud-based platform that enables users to use multiple Site Manager instances in a single place. This can give you a bird's eye view across all backup deployments, bringing clarity and control to organizations and managed service providers.

For SMEs

Manage the challenges of growth and scaling your IT assets by using Site Manager to centrally monitor and configure workstation and server backups.

For Enterprise

Simplify the complexity of data protection within a modern enterprise by using Site Manager and MultiSite to gain visibility on your backups. across different parts of your organization.

For MSPs

Protect your customers data with ease and confidence using Site Manager and MultiSite to configure and deploy backup for multiple tenants.

Systems and compatibility

Site Manager
Reflect Agent will work on Windows 7 and later.
Site Manager Server
Site Manager Server will work on Windows XP/Server 2K3 and later.
Appropriate OS level service packs and hotfixes may be required for installation on some Windows versions. See Macrium Knowledge Base for details.
