

Unitrends UniView

UNIFY ON-PREMISES, SAAS AND CLOUD DATA PROTECTION

Simplify Data Complexity

Data is exploding, but not in one place. IT professionals have been struggling to manage data across multiple infrastructures, such as data centers, cloud and SaaS productivity platforms like Microsoft Office 365. This problem has been exasperated with the unprecedented rise in remote work brought about by the COVID-19 pandemic. As a result, managers are looking towards BCDR to avoid managing unnecessary infrastructures. But the truth is, as infrastructure gets more complicated with hybrid and multi-cloud strategies, protecting it and keeping it running is more complex, costly and unreliable. Unitrends UniView offers a fresh approach for managing backup data living on multiple platforms.

UNITRENDS UNIVIEW USES A SIMPLE, CENTRALIZED MANAGEMENT HUB AND ADOPTS A BEST-OF-BREED APPROACH TO YOUR DATA BASED ON WHERE IT LIVES AND HOW YOU NEED TO RECOVER IT. THIS APPROACH DRIVES SIMPLICITY, RELIABILITY AND TOTAL COST OF OWNERSHIP.

BCDR FOR THE NEW NORMAL

The way you back up and recover data that lives in SaaS platforms is different from how you handle the data center, which is different from endpoints. However, most vendors try to attack these workloads with the same architecture, the same infrastructure and the same approach. Unitrends UniView lets each user manage Unitrends appliances, as well as direct-to-cloud and Office 365 backup approaches, in one place. This modern user experience accelerates how IT responds to data loss and downtime situations in today's complex hybrid and multi-cloud world.

How UniView Works

UniView is a free SaaS-based management platform that provides UI and API integration across three best-of-breed approaches to backup and recovery: Unitrends backup appliances, direct-to-cloud backup and Spanning Office 365 backup.

MANAGE MULTIPLE APPLIANCES

The centralized management with Unitrends UniView allows you to manage multiple Recovery Series and Unitrends Backup appliances from one portal. UniView brings together time-saving functionality so IT admins can move quickly. Prioritize issues with rule-based alerts via BackupIQ technology, so the most critical issues are addressed first and easily manage automatic updates across appliances from one place with Helix.

PROTECT DATA ON-THE-GO

Backing up data in motion for your on-the-go users requires a different strategy, but UniView works with Unitrends' direct-to-cloud backup solution so data protection and recovery can be managed from one portal. Unitrends Cloud Backup requires no local backup storage or infrastructure, making it the simplest way to protect and recover data inside of endpoints and remote server environments anytime, anywhere.

OFFICE 365 BACKUP MADE EASY

SaaS data needs specialized protection, but UniView centralizes the management of your Office 365 backup as well. UniView works with Spanning Office 365 Backup – a cloud-to-cloud backup purpose-built for Office 365 data. Also available as part the platform is Office 365 Dark Web Monitoring that flags compromised or stolen employee credentials, enabling you to take proactive steps to secure those accounts before any malicious activity occurs.

UNIVIEW IS A FREE SAAS MANAGEMENT PLATFORM
