

Environmental Policy of Prianto GmbH

Mission statement on sustainability:

The protection of people and the environment is an integral part of our corporate philosophy and influences every one of our operations and decisions. Continuous improvements are thus achieved through regular reviews of the environmental goals and the environmental management system.

Proper disposal of sales packaging is just as much a matter of course for us as the return and proper disposal of empty toner cartridges or the proper disposal of batteries.

Prianto GmbH's mission statement on sustainability summarizes the principles of our sustainable actions: For us, sustainability means future viability with the aim of handing over a healthy environment as well as stable economic and social conditions to future generations. We feel committed to this guiding principle.

Taking sustainability into account serves to secure the long-term value of our company. Sustainability is an integral part of our business policy decisions. Beyond the legal requirements, we take social, ethical, and ecological aspects into account in our daily work. We check our daily work processes for aspects relevant to sustainability and develop them further in the sense of a continuous improvement process. We are committed to ensuring a healthy and safe working environment for our employees, with legal requirements being a minimum for this. As far as possible, we use the most environmentally friendly technology and conserve natural resources beyond the legal requirements.

For us, sustainability also includes a clear commitment to developing sustainable concepts. Active cooperation and solution-oriented dialogue in international partnerships are an expression of our ecological responsibility.

1. Climate Neutrality

We do everything in our power to operate Prianto GmbH as climate-neutrally as possible. In accordance with our approach "avoid before reduce before offset", we analyze emissions, explore reduction potentials, derive recommendations for measures and enable the offsetting of CO₂ emissions that cannot be further reduced. Climate neutrality - for Prianto GmbH a holistic solution.

2. Operational Ecology

For Prianto GmbH, the topic of sustainability means more than just taking ecological and social aspects into account in our own building management and purchasing. By handling natural resources responsibly, ourselves, we credibly communicate our sustainable commitment to our customers, business partners, suppliers, employees, and the public. We are based on principles for the efficient operational use of resources and the consideration of ethical criteria, which we have anchored in guidelines. The guideline regulates responsibilities in operational environmental protection. At the same time, it helps us to further optimize sustainable aspects of our business operations.

Green IT

We focus on energy-saving IT infrastructures when selling to our customers as well as in the IT products we use ourselves. When investing in IT products, we always take the power consumption of the device into account in addition to the price to conserve ecological resources.
