TeamViewer Classroom

Teach, Learn, and Connect from Anywhere, Anytime

TeamViewer Classroom is a distance learning platform for schools and universities. Designed to be intuitive and accessible, Classroom creates a collaborative, inclusive, and distinctly modern educational experience in remote and hybrid learning environments.

Key Features

Video Conference

The video interface is the basis of an online class or lecture. Participants can choose between gallery view and speaker view. Within a class session, Breakout Rooms are easy to create through custom or random assignment.

Chat & Shared Notes

Use Chat to share links, share files, or pose questions to the entire group, and use a private chat to follow up with an individual. Take notes for yourself or as a group during a class and export or save them for later.

Whiteboard

Students and instructors can draw, point, circle, highlight, and type out ideas on the same Whiteboard. Upload images or templates, and download the board to review later.
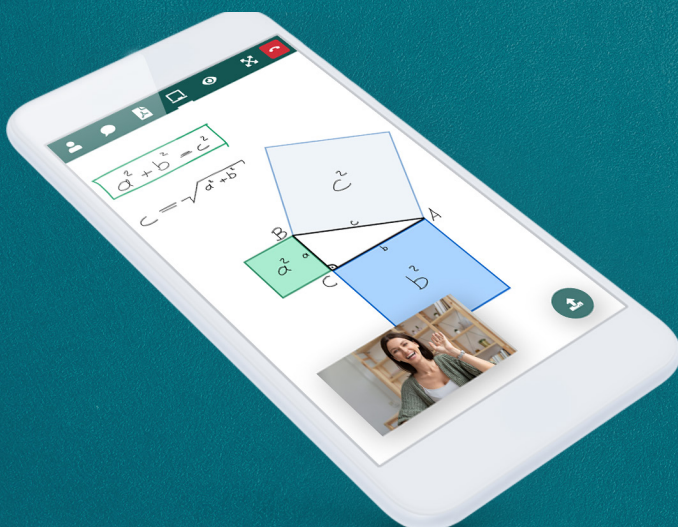

Interactive Document Collaboration

Interactively share a PDF with the group during an online class or lecture. This document is visible for all participants in real time, and in one click, can be interacted with and annotated by the sharer and selected participants. Download the annotated file for later.

Surveys & Quizzes

Instructors can create surveys and quizzes, which students can fill out in real time during an online class or lecture. Choose between a variety of question formats, such as true/false, fill-in-the blank, free text and multiple choice.

Configurable In-Conference Permissions

Within an online class or lecture, instructors can control how participants can interact with the class. They can define permissions for video, microphone access, screen sharing, viewing participant lists, and more.

Additional Features

- Breakout Rooms
- Protected Conferences
- Calendar Sync
- Backgrounds (Blur & Images)
- Conference Recordings
- Raise Hand
- Phone Dial-in
- Screen Sharing
- Logo & Color Customization
- LMS & Moodle Plugin

A Product From Europe, For Europe

Privacy & Security

TeamViewer Classroom is designed specifically for schools and universities, developed in the EU, and hosted in Germany (ISO/IEC 27001-certified). TeamViewer is fully GDPR compliant.

Flexibility & Integrability

Classroom is developed by TeamViewer which ensures quick adjustments and customizations. TeamViewer Classroom is highly integrable to extend your existing platforms, web-based for barrier-free usage, and compatible with all major browsers and devices.

Accessibility

TeamViewer Classroom is designed according to WCAG accessibility standards (AA level) and optimized for disabled users. TeamViewer Classroom undergoes regular user tests and passed an accessibility audit conducted by the Austrian Institute of Technology (2021).
